

## Question 2

Grace Grant<sup>a</sup>

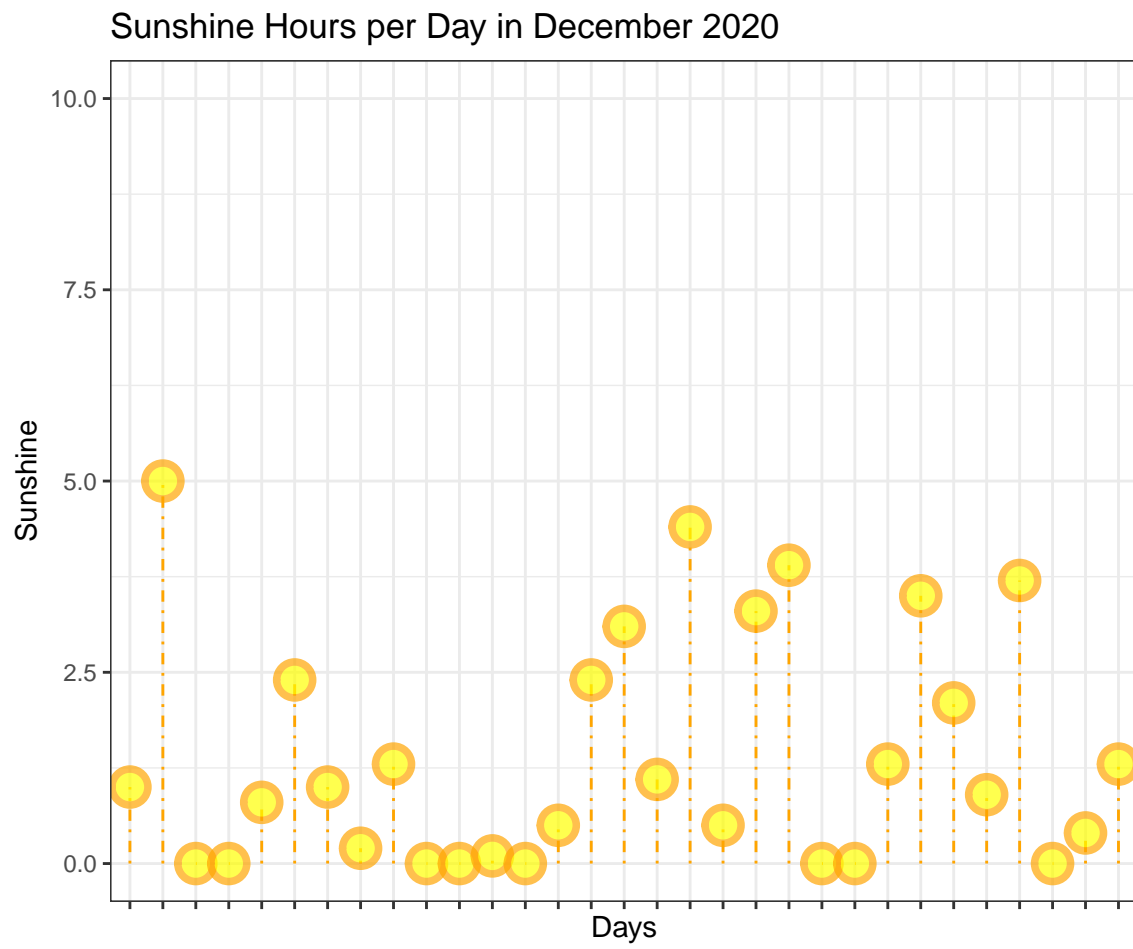

*<sup>a</sup>Stellenbosch University, Stellenbosch, South Africa*

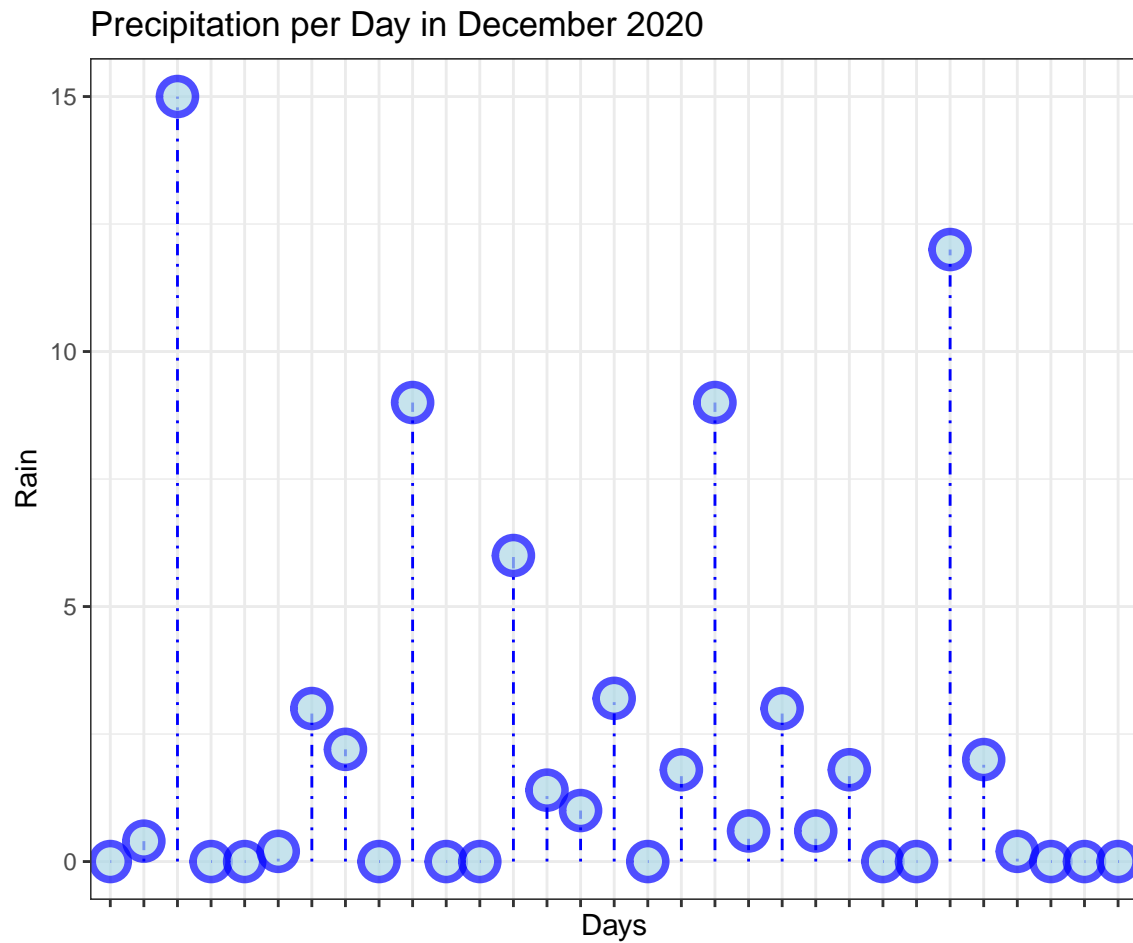

---

---

### 1. London sunshine and weather statistics

I really don't think what you have to say about English weather is right. Haven't you heard how much the Brits complain about their weather?! I've got some data that uses both London's weather and the weather in central UK so I'm going to show you how bad the UK weather really is and maybe convince you to stay here in sunny South Africa.

Look at that! Every day in December 2020 had less than 5 hours of sunshine per day while it rained almost every day. Do you really want to be spending your December holiday in the cold and wet UK when you know we'll all be having a wonderful Christmas sitting on the beach, getting a nice tan?

I've got some more graphs too that will hopefully further my point.

## 2. Average temperature

This graph shows that average monthly temperatures for the central UK, which is where you're wanting to go, since 1980. You can see that the average temperature hasn't changed all that much since 1980 (so don't be fooled by rising global temperatures!) and that the average is round about 9/10 degrees. I don't know about you, but I think that's pretty cold! I've even added to average temperature for Cape Town, the red line, which you can see is way higher than that of the UK!
